WHAT IS FOM?

FillOut Manager is a program, which enables you to fill out e.g. internet forms very fast. Drag your text directly from FOM and drop it into the edit-control you want to have filled. It's also possible to drag&drop multiple lines of data at once. You're probably typed in a lot of redundant information in various forms. When you use FillOut Manager, you only have to type it once.

Please notice: Unfortunately, there seems to be a serious problem with FillOut Manager and Windows 98 or Internet Explorer 5.0 installations.
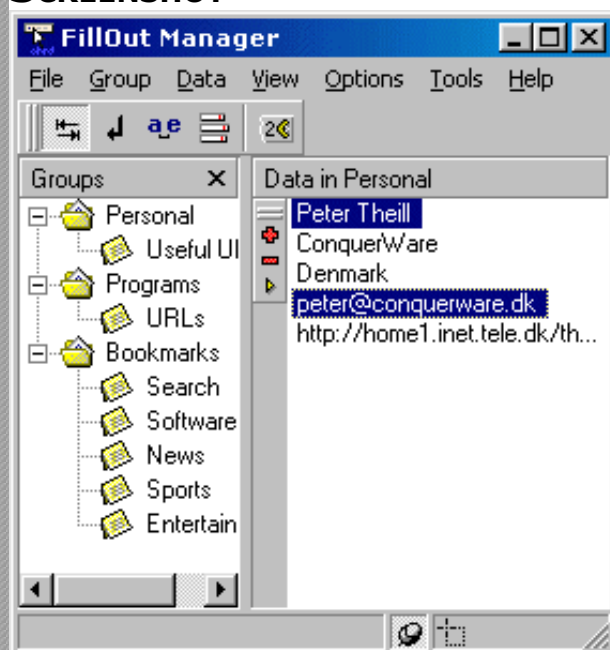

You are able to fix the above problem by hiding FOMs status bar. To do this, follow these steps:

1. Select **View** menu

2. Uncheck **Status bar** menuitem

HELP

A Windows Help file is included with the package. Open this help file inside FillOut Manager by selecting Contents from the Help-menu. Furthermore, I've created a small tutorial to get started quickly. The tutorial is available right here.

SCREENSHOT

HISTORY

March 7 '98

- Minor change in About-box.

  February 18 '98

- Fixed bug when sending data to same window multiple times.

  February 11 '98

- First release.

REVIEWS
FillOut Manager has been reviewed by ZD Net, but was judge hard - received only 3 of 5 stars. Obviously, the "reviewer" must have had a very bad day. Anyway, here's what they say:

"Fillout Manager is a freeware 32-bit program that's been designed to help you fill out Internet forms faster. Using its Explorer-liked two-paned hierarchical interface, just drag and drop information into your Web browser or another program. Fillout Manager can also be used to compile personal info, bookmark your favorite URL's (several are preloaded), or even used to jot down random thoughts."
